Android & Firebase

Part 4

Firebase Integration

Agenda

- ❑ Firebase history
- ❑ The all new Firebase
- ❑ Real-time database
- ❑ Firestore
- ❑ Authentication
- ❑ Storage
- ❑ Remote config
- ❑ Hosting
- ❑ Crash reporting
- ❑ Test lab
- ❑ Firebase cloud messaging
- ❑ Dynamic links
- ❑ App indexing
- ❑ Analytics
- ❑ CoffeeMate Highlights & Demos along the way...

Agenda

- ❑ Firebase history
- ❑ The all new Firebase
- ❑ Real-time database
- ❑ Firestore
- ❑ Authentication
- ❑ Storage
- ❑ **Remote config**
- ❑ Hosting
- ❑ Crash reporting
- ❑ Test lab
- ❑ Firebase cloud messaging
- ❑ Dynamic links
- ❑ App indexing
- ❑ Analytics
- ❑ CoffeeMate Highlights & Demos along the way...

Remote Config

Update your App without
actually updating it

Remote Config

- ❑ Change behavior and config without app update.
- ❑ Set in-app default values that app uses to work.
- ❑ Override these values from firebase console when app is published.
- ❑ Change configuration on the fly.
- ❑ Change configuration based on condition. Ideal for A/B testing

Customize Experience

- ❑ Create segments and customize experience
- ❑ Background = blue (default green) if
 - Country = India &&
 - OS Type = Android
- ❑ Discount = 30% (default 5%) if
 - OS Type = iOS
 - Version = 2.3.0

The “2 Line Code” cliché

❑ Fetch parameters from remote config server

- `mFirebaseRemoteConfig.fetch(300).addOnCompleteListener(...)`

❑ Make the fetched parameters available to your app

- `mFirebaseRemoteConfig.activateFetched();`

❑ And all is done for your app

Remote Config

Quick DEMO... TBD

Remote Config

PARAMETERS

Customise and experiment with app behaviour using server-side configuration parameters

[Learn more](#) [View the docs](#)

[ADD YOUR FIRST PARAMETER](#)

Example: holiday_promotion_enabled = true

Go to docs

Remote Config

PARAMETERS

This is the key you'll pass to the Remote Config SDK, for example:
`config.getBoolean("holiday_promo_enabled");`

| Parameter key | Default value | |
|--------------------------------|----------------|--------------------|
| Example: holiday_promo_enabled | (empty string) | Other empty values |

Thanks!

Some important points though....

- ❑ Do not think RDBMS, think JSON. How data should be structured is very important.
- ❑ Firebase has a recycler view, that integrates with real time database smoothly without any listeners.
- ❑ Test lab which is available in paid plan (Blaze), is an amazing feature for testing your app on different real and virtual devices.
- ❑ Set developer mode to true when testing remote config.
